Due to our policy of continuing research, specifications are subject to change without prior notice.

John Shearer Ltd is pleased to announce the release of our new 630 spring release tyne. Based on the successful 620 tyne, the 630 has been strengthened in all areas, offering higher breakout while limiting the overall load that is applied to the frame of the drill.

Featuring dual springs, a strong heat treated spring steel shank, a large diameter greasable pivot pin with hardened bushes, heavy duty clamp bolts and a robust spring rod, make this tyne the ideal upgrade for your John Shearer drill or cultivator

With features like 2-bolt foot mounting (the same as used on our Universal Cultivator) this tyne can accommodate multiple points and fittings. A seeding tube is also available.

The design is low profile and allows easy fitment on Drills (in particular the 4 and 6 row Direct Drills) and Cultivators (e.g. the 4/150, 5/160). The straight leading edge shank and good underframe clearance promotes excellent trash flow.

OUTSTANDING FEATURES & SPECIFICATIONS

- BREAKOUT PRESSURE GREATER THAN 350lb
- HEAVY DUTY CONSTRUCTION
- 614mm UNDERFRAME CLEARANCE
- STANDARD 'V' MOUNT SUITS 75 x 75mm RHS (AS USED ON MOST SHEARER DRILLS AND CULTIVATORS)
- SIMPLE 2-BOLT MOUNTING CLAMP
